

Input

Role: You are a senior software QA engineer.

Context: We are testing a simple login page. It has:

- A username field (accepts email format)
- A password field (min 8 characters)
- A "Login" button
- A "Forgot Password" link

Instruction: Generate 8 test cases for this login page.

Constraints: Include at least 2 negative test cases and 1 boundary value test case.

Output Format: Test ID | Test Case Name | Steps | Expected Result

Output

TC_01 | Valid Login with Correct Credentials

Steps:

- Enter a valid email in username field
- Enter a valid password (≥ 8 characters)
- Click Login

Expected Result: User is successfully logged in

TC_02 | Invalid Login with Incorrect Password (Negative)

Steps:

- Enter valid email
- Enter incorrect password
- Click Login

Expected Result: Error message displayed, login denied

TC_03 | Invalid Email Format (Negative)

Steps:

- Enter invalid email
- Enter valid password
- Click Login

Expected Result: Validation error shown

TC_04 | Password Less Than Minimum Length (Boundary)

Steps:

- Enter valid email
- Enter 7-character password
- Click Login

Expected Result: Password validation error

TC_05 | Empty Fields (Negative)

Steps:

- Leave username and password empty
- Click Login

Expected Result: Required field errors displayed

TC_06 | Forgot Password Link

Steps:

- Click Forgot Password

Expected Result: Redirect to password reset page

TC_07 | Input with Leading/Trailing Spaces

Steps:

- Enter email/password with spaces
- Click Login

Expected Result: Inputs trimmed or validation applied

TC_08 | Password Case Sensitivity

Steps:

- Enter valid email
- Enter password with wrong case
- Click Login

Expected Result: Login fails with error message
